HW11 Domain Adaption

1. Visualize distribution of features across different classes

(plz make the t-SNE distribution with early, middle, final stage)

由左至右分別為 epoch=200, 500, 900

解釋原因

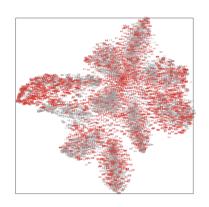

在訓練初期各個類別之feature較為分散,在中期之後有逐漸趨近集中之趨勢,晚期則各個feature都分得很開、分類更為明確。整體來說,從初期到晚期,其數據資料類別有更為集中的趨勢,且彼此數據較少被錯誤分類,代表此為良好的Feature萃取分類器。

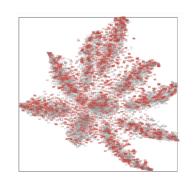

2. Visualize distribution of features across different domains

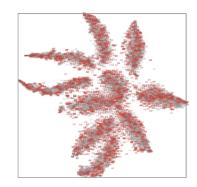

(plz plot distribution with early, middle, final stage)

由左至右分別為 epoch=200, 500, 900

HW11 Domain Adaption 1

解釋原因

在訓練初期兩domain之間特徵分佈不同,隨著Epoch的增加,到中期或是後期之後2個 Domain之間的Feature之間形成幾乎相同的分佈。由於在Source domain 和 target domain都有非常相近的分佈,由此可知其這個Feature萃取器對於Domain Adaption任務 能進行相當良好的優化。
